Adobe InDesign **CC Server**©
Product and LicensingGuide

WHAT IS INDESIGN CC SERVER

A technical perspective

A headless, 64 bit native server engine that runs on Mac and Win server platforms ✓

✓ Can be programmatically driven by C++ plugins, Scripting (Visual Basic, AppleScript and JavaScript), SOAP and XML transformations using InDesign Markup Language (IDML)

An engine built on top of the desktop InDesign and InCopy codebase, and therefore inherits all the core functionality of those applications ✓

✓ Provides scalability through session support and the ability to run one or more instances on the same server using InDesign CC Server's load balancing and queuing system or via a custom solution from an integrator

With no built in user interface customers and partners can create their ideal user experience, tailored to the specific customer or workflow ✓

✓ Provides world wide language support, including support for OpenType fonts and composition of Roman, Chinese, Korean, Indic and Japanese languages

NOTE: InDesign Server is NOT a virtualized version of desktop InDesign

WHAT IS INDESIGN CC SERVER

A business perspective

A proven server engine, already used every day by many of the world's most successful enterprise and publishing businesses

Centralize resources ✓

Reduce staffing needs for repetitive processes ✓

Simply and speed up existing design processes ✓

Increase effectiveness of marketing campaigns ✓

SERVER

BUSINESS

A way for customers around the world to increase their return on investment:

MORE INFO
